

Is Your Site Plasterboard Ready?

Direct to site orders need the site to have clear and unobstructed access to allow the delivery team to safely and efficiently deliver your order.

KEY THINGS TO ENSURE A TROUBLE FREE DELIVERY, FIRST TIME

- Clear and unobstructed access (e.g. building waste, waste bin and scaffolding need to be removed, create a safe walkway/steps if necessary)
- Clean, clear, dry and obstacle free area to store plasterboard (e.g. building is weather proof)
- Site address is clearly visible
- Site contact person or mobile number is available
- Height of door entry at a minimum of 2m

COMMON HAZARD AREAS:

Poor housekeeping increases the risk of injuries, building waste or scaffolding need to be removed before the plasterboard is delivered

- No clear access to site and building
- Waste and waste bins blocking entry ways
- Scaffolding obstructing the building access;

Minimum height of entry is 2m

RECOMMENDATION

- Protect your aluminium joinery, sliders, window frames, and doors with foam polsters or wood planks
- For safety reasons flat/horizontal stacking of plasterboard sheets is required wherever possible. Plasterboard can be stored vertically as a last resort and only on secure timber framing. Sheets must always be restrained to prevent falling. The floor area must be clean, clear, dry and free of obstacles
